

CLOUD FUNDAMENTALS

Introduction

Cloud Computing is the delivery of computing services such as servers, storage, databases, networking, and software over the internet.

Cloud Service Models

Infrastructure as a Service (IaaS)

Provides virtualized computing resources over the internet.

Example:

- Amazon EC2
- Microsoft Azure VM

Platform as a Service (PaaS)

Provides a platform for application development and deployment.

Example:

- Google App Engine
- Azure App Service

Software as a Service (SaaS)

Provides software applications through the internet.

Example:

- Gmail
- Microsoft Office 365

Cloud Deployment Models

Public Cloud

Services available to the general public.

Private Cloud

Services dedicated to a single organization.

Hybrid Cloud

Combination of public and private clouds.

Popular Cloud Providers

- Amazon Web Services (AWS)
- Microsoft Azure
- Google Cloud Platform (GCP)

Conclusion

Cloud computing provides flexible, scalable, and cost-effective solutions for modern businesses and applications.
